Albrecht and I went down in a shuttleship, leaving the stellatomic orbited pole-to-pole two thousand miles above Alpha Centauri's second planet. While we took an atmosphere-brushing approach which wouldn't burn off the shuttle's skin, we went as swiftly as we could.

A week before we had completed man's first trip through hyperspace. We were now making the first landing on an inhabited planet of another sun. All the preliminary investigations had been made via electronspectroscopes and electrontelescopes from the stellatomic.

We knew that the atmosphere was breathable and were reasonably certain that the peoples of the world into whose atmosphere we were dropping were at peace. We went unarmed, just the two of us; it might not be wise to go in force.

We were silent, and I know that Harry Albrecht was as perplexed as I was over the fact that our all-wave receivers failed to pick up any signs of radio communication whatever. We had assumed that we would pick up signals of some type as soon as we had passed down through the unfamiliar planet's ionosphere.

The scattered arrangement of the towering cities appeared to call for radio communications. The hundreds of atmosphere ships flashing along a system of airways between the cities seemed to indicate the existence of electronic navigational and landing aids. But perhaps the signals were all tightly beamed; we would know when we came lower.

We dropped down into the airway levels, and still our receivers failed to pick up a signal of any sort—not even a whisper of static. And strangely, our radarscopes failed to record even a blip from their atmosphere ships!

"I guess it's our equipment, Harry," I said. "It just doesn't seem to function in this atmosphere. We'll have to put Edwards to work on it when we go back upstairs."

We spotted an airport on the outskirts of a large city. The runways were laid out with the precision of Earth's finest. I put our ship's nose eastward on a runway and took it down fast through a lull in the atmosphere ship traffic.

As we went down I saw tiny buildings spotted on the field which surely housed electronic equipment, but our receivers remained silent.

I taxied the shuttle up to an unloading ramp before the airport's terminal building and I killed the drive.

"Harry," I said, "if it weren't that their ships are so outlandishly stubby and their buildings so outflung, we might well be on Earth!"

"I agree, Captain. Strange, though, that they're not mobbing us. They couldn't take this delta-winged job for one of their ships!"

It *was* strange.

I looked up at the observation ramp's occupants—people who except for their bizarre dress might well be of Earth—and saw no curiosity in the eyes that sometimes swept across our position.

"Be that as it may, Harry, we certainly should cause a stir in these pressure suits. Let's go!"

We walked up to a dour-looking individual at a counter at the ramp's end. Clearing my throat, I said rather inanely, "Hello!"—but what *does* one say to an extrasolarian?

I realized then that my voice seemed thunderous, that the only other sounds came from a distance: the city's noise, the atmosphere ships' engines on the horizon—

The Centaurian ignored us.

I looked at the atmosphere ships in the clear blue sky, at the Centaurians on the ramp who appeared to be conversing—and there was no sound from those planes, no sound from the people!

"It's impossible," Harry said. "The atmosphere's nearly Earth-normal. It should be—well, damn it, it *is* as sound-conductive; *we're* talking, aren't we?"

I looked up at the Centaurians again. They were looking excitedly westward. Some turned to companions. Mouths opened and closed to form words we could not hear. Wide eyes lowered, following something I could not see. Sick inside, I turned to Albrecht and read confirmation in his drawn, blanched face.

"Captain," he said, "I suspected that we might find something like this when we first came out of hyperspace and the big sleep. The recorders showed we'd exceeded light-speed in normal space-time just after the transition. Einstein theorized that time would not pass as swiftly to those approaching light-speed. We could safely exceed that speed in hyperspace but should never have done so in normal space-time. Beyond light-speed time must conversely accelerate!"

"These people haven't seen *us* yet. They certainly just observed our landing. As we suspected, they probably do have speech and radio—but we can't pick up either. We're seconds ahead of them in time and we can't pick up from the past sounds of nearby origin or nearby signals radiated at light-speed. They'll see and hear us soon, but we'll never

receive an answer from *them*! Our questions will come to them in their future but we can never pick answers from their past!"

"Let's go, Harry," I said quickly.

"Where?" he asked. "Where can we ever go that will be an improvement over this?" He was resigned.

"Back into space," I said. "Back to circle this system at a near-light-speed. The computers should be able to determine how long and how slow we'll have to fly to cancel this out. If not, we are truly and forever lost!"

Marion Zimmer Bradley

Year of the Big Thaw

In this warm and fanciful story of a Connecticut farmer, Marion Zimmer Bradley has caught some of the glory that is man's love for man—no matter who he is nor whence he's from. By heck, you'll like little Matt.

Mr. Emmett did his duty by the visitor from another world—never doubting the right of it.

Hal K. Wells

Devil Crystals of Arret

Facing a six-hour deadline of death, young Larry raids a hostile world of rat-men and tinkling Devil Crystals.

Albert Hernhuter

Texas Week

One of the chief purposes of psychiatry is to separate fantasy from reality. It is reasonable to expect that future psychiatrists will know more about this borderline than the most learned doctors of today. Yet now and again even the best of them may encounter situations that defy all logic.

Meeting the little man who isn't there is rated an horrendous experience. But discovery that the man is there may be even worse.

Philip K. Dick

Beyond the Door

Did you ever wonder at the lonely life the bird in a cuckoo clock has to lead—that it might possibly love and hate just as easily as a real animal of flesh and blood? Philip Dick used that idea for this brief fantasy tale. We're sure that after reading it you'll give cuckoo clocks more respect.

Philip K. Dick

The Crystal Crypt

Stark terror ruled the Inner-Flight ship on that last Mars-Terra run. For the black-clad Leiters were on the prowl ... and the grim red planet was not far behind.

Philip K. Dick

The Defenders

No weapon has ever been frightful enough to put a stop to war--
perhaps because we never before had any that thought for
themselves!

Philip K. Dick

Beyond Lies the Wub

The slovenly wub might well have said: Many men talk like philo-
sophers and live like fools.

William W. Stuart

Inside John Barth

Every man wants to see a Garden of Eden. John Barth agreed with
his whole heart—he knew that he'd rather see than be one!

Frank Belknap Long

The Calm Man

Sally watched the molten gold glow in the sky. Then knew she
would not see her son and her husband ever again on Earth.

Chas. A. Stopher

Solar Stiff

Totem poles are a dime a dozen north of 63° ... but only Ketch, the
lying Eskimo, vowed they dropped out of frigid northern skies.
